

PART 2 — CREATE .EXE FILE USING PYINSTALLER (STEP-BY-STEP)

This is the **WOW** part 🔥

🌱 STEP 1: INSTALL PYINSTALLER

Open **Command Prompt** (NOT VS Code):

```
pip install pyinstaller
```

🌱 STEP 2: GO TO PROJECT FOLDER

```
cd path\to\your\project
```

Example:

```
cd C:\SmartDataCleaner
```

🌱 STEP 3: CREATE EXE FILE

```
pyinstaller --onefile --windowed smart_data_cleaner.py
```

What this does:

- --onefile → single EXE
 - --windowed → no black console
 - Creates a real desktop app
-

🌱 STEP 4: FIND YOUR EXE

After completion:

```
dist/
```

```
└─ smart_data_cleaner.exe
```

🎉 **This is your software**
